

PC Best Networks VoIP Recorder V2

A Passive Recording Solution Can Efficiently Record 200+ Simultaneous Calls. Support Most VoIP Protocols and Devices. Affordable Price.

A passive SIP and VoIP call recording software.

It can record any softphone and hardware phone calls by sniffing network traffic.

Network Topology:

Why choose a passive recorder:

1. Save your host PBX's MIPS, so your PBX can run efficiently.
2. Safer to record. If recorder goes wrong (for example, disk failure), it won't affect PBX hardware.
3. Recorder can work with File/ Archive Server and DB Server.

Features:

1. Sniffing network traffic, real-time monitoring and recording VoIP calls for any hardware, software phones, IP PBX and devices.
2. Supporting protocol SIP, H323, SKINNY, SCCP, MGCP, IAX2, RTP.
3. Compatible with most brands (Cisco, Asterisk, AudioCodes, Dialogic, Samsung, Snom, Linksys, Grandstream, ...)
4. Recording VoIP calls into wav, mp3 and xml files. XML files contain caller, callee, call start time, call duration and audio file path information.
5. Supporting PCMU (G711 mulaw), PCMA (G711 alaw), G726-32, GSM, G729, Speex, iLBC (20ms or 30ms).
6. Filtering calls by Call ID or IP address.
7. Working with MS SQL Server and searching calls in database.
8. Reading Wireshark pcap file as input.
9. Support real-time monitoring and listening to the recording conversation.
